

1.What is Responsive web design?

- Responsive design is essentially a technique for building websites that automatically adjust their features and information to fit the size of the screen being used to view them.
- It stops graphics from becoming wider than the screen and saves visitors using mobile devices from having to read your material more slowly.
- In easy words, according on the screen size and orientation of the device being used to view it, responsive web design (RWD) produces dynamic adjustments to the layout of a website.

2.Why it is important?

- Responsive design allows your website's content to flow smoothly across all screen resolutions and sizes, resulting in a stunning appearance on all devices.
- It also eliminates the need to maintain separate versions of your website for mobile and desktop, saving you time, resources, and effort.
